                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                           49576

It currently consists of 32 contigs. The true order of the pleces not known and their order in this sequence record is arbitrary Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Pred. No.

is

the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

* NOTE: This is a 'working draft' sequence. It currently

* consists of 13 contigs. The true order of the pieces

* is not known and their order in this sequence record is

* arbitrary (ags between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record, will be updated with the finished sequence

* as soon as it is available and the accession number will

* be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                NOTE: This is a 'working draft' sequence. It currently consists of 32 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                            8809

* NOTE: This is a 'vorking draft' sequence. It currently

* consists of 4 contigs. The true order of the pieces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

* as soon as it is available and the accession number will

* be preserved......
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Homo sapiens chromosome 5 clone CTD-2013L15, SEQUENCE, 4 unordered pieces. **NOTE: This, is a 'working draft' sequence. It currently
consists of 3 contigs. Gaps between the contigs
**are represented as runs of N. The order of the pieces
**is believed to be correct as given, however the sizes
**of the gaps between them are based on estimates that have
**provided by the submittor.

**This sequence will be replaced
**the accession number will be preserved.

**the accession number will be preserved.

Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submitter. This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

* NOTE: This is a 'working draft' sequence.

* This sequence will be replaced

* by the finished sequence as soon as it is available and

* the accession number will be preserved.

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            nucleic search, using sw model

Sequence 16, Application US/09128155

Patent No. 6117654

I Patent No. 6117654

I GENERAL INFORMATION:
APPLICANT: PAN, Yang
ITILE OF INVENTION: NOVEL MOLECULES OF TANGO-77 RELATED PROTEIN FAMILY
FILE REPERENCE: 09404/052001

CURRENT APPLICATION UNMER: US/09/128,155

CURRENT FILING DATE: 1998-08-03

EARLIER APPLICATION UNMER: US 60/091,650

EARLIER APPLICATION UNMER: US 60/054,646

RANLIER APPLICATION UNMER: US 60/054,646

NUMBER OF SEQ ID NOS: 18

SOFTWARE: FASTSEQ for Windows Version 3.0

LENGTH: 152331

TYPE: DNA
ORGANISM: Homo saptens
                                           RESULT 5
US-09-103-840A-1
Sequence 1, Application
Patent No. 6294328
GENERAL INFORMATION:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    FEATURE:

Description

pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to a method of diagnosing a cellular CC proliferative disorder of breast tissue, which involves determining the CC state of methylation of one or more nucleic acids isolated from the CC subject, where the state of methylation of the nucleic acids as compared CC with a state of methylation from a subject not having the cellular CC proliferative disorder of breast tissue is indicative of a cellular CC proliferative disorder of breast tissue in the subject. The nucleic acids constructed by the cellular CC constructed by the cellular CC constructed by the cellular cCC constructed by the cellular cCC constructed by the cellular cCC constructed by the cellular proliferative disorder including cuctal carcinoma in situ, lobular carcinoma, tubular carcinoma, medullary carcinoma, metaplastic colloid carcinoma, tubular carcinoma in situ, lobular carcinoma in situ and cCC colloid carcinoma, tipular carcinoma in situ, lobular carcinoma in situ and cCC colloid carcinoma, tipular carcinoma in situ, lobular carcinoma in situ and cCC colloid carcinoma in situ. The present sequence is a gene fragment used cCC in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                Sequences shown in AAV54616 to AAV54621 represent LU105 specific
CC polynucleotide sequences. These are used in the method of the invention
CC for detecting target LU105 nucleic acid. The method comprises treating a
CC sample with at least one LU105 specific nucleic acid, or its complement
CC which is at least 50 percent identical with the LU105 specific nucleic
CC acid sequences (AAV54616 to AAV54621). LU105 is a lung disease marker.
CC cells transformed with a recombinant expression system that contains
CC LU105 specific nucleic acid fragments, are used to express recombinant
CC LU105 specific nucleic acid fragments, are used to express recombinant
CC used to detect the LU105 antigen, and correspondingly this antigen is
CC used to detect specific antibodies, in usual immunoassays. The LU105
CC used to detect specific antibodies, in usual immunoassays staging,
CC monitoring, prognosis, prevention, treatment and determination of
CC susceptibility to, lung disease, specifically cancer. The LU105
CC concentration, in altered form or in an unusual body compartment). LU105
CC can be detected in blood, plasma or serum in an inexpensive, non-invasive
                                                                         Query Match

CC golynucleotide sequences. These are used in the method comprises treating a complement to sample with at least one LUIO5 specific nucleic acid. The method comprises treating a complement of the invention complement complement acid sequences (AAV54616 to AAV54621). LUIO5 is a lung disease marker. CC cells transformed with a recombinant expression system that contains complement complements are used to express recombinant contains complements. The antibodies are cused to express recombinant contains complements are used to express recombinant contains complements. The antibodies are used to detect the LUIO5 antigen, and correspondingly this antigen is complements, are used to express recombinant contains complements. The antibodies are used to detect the LUIO5 antigen, and correspondingly this antigen is considered to detect specific antibodies, in usual immunoassays. The LUIO5 considering, prognosis, prevention, treatment and determination of considering, prognosis, prevention, treatment and determination of concentration, in altered form or in an unusual body compartment). LUIO5 concentration, in altered form or in an unusual body compartment). LUIO5 can be detected in blood, plasma or serum in an inexpensive, non-invasive concentration.

                XX AAZ98109 to AAZ98242 encode AAX87224 to AAX87357 which represent the CC human signal peptide-containing proteins HSPP-1 to HSPP-134. HSPPs have anticancer, anti-inflammatory, antimicrobial, nootropic, hepatotropic, concerning or anti-inflammatory, antimicrobial, nootropic, hepatotropic, activities, and can gene therapy. HSPPs can be used to treat or prevent disorders associated with decreased activity or function of HSPP are associated with increased concerning of HSPP. Such diseases include cell proliferation concerning or the concerning of HSPP. Such diseases include cell proliferation of HSPP are used to treat or prevent disorders associated with increased concerning cancerning or HSPP. Such diseases include cell proliferation concerning or HSPP. Such diseases include cell proliferation concerning or HSPP. Such diseases include cell proliferation concerning or HSPP. Such diseases include cell proliferation or astable anticological proportion of HSPP. Antagonists and concerning or the concerning or the concerning or the concerning or the recombinant production of HSPP, for concepts and monitoring), in gene therapy, as antisense, large transfer or detecting HSPP in standard hybridisation and amplification assays (for concepts of the proportion of HSPP, for concepts of the proportion of HSPP, for concerning or ribozyme therapeutics, for detecting related sequences triplex-forming or ribozyme therapeutics, for detecting related sequences concerning the specific antibodies (Ab) and to screen for agonists and concepts and for chromosomal mapping. HSPP are also used to concepts the proportion of HSPP concerning or the proportion of HSPP concepts and proportion of HSP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; signal peptide-containing protein; HSPP; diagnosis; cancer; inflammation; cardiovascular disease; anticancer; anti-inflammatory; antimicrobial; nootropic; neuroprotective; cardiovascular; hepatotropic; antiasthmatic; gene therapy; cell proliferation; neurological disorder; reproductive disorder; developmental disorder; arteriosclerosis; cirrhosis; psoriasis; acquired immune deficiency syndrome; anaemia; asthma; Crohn's disease; infection; Alzheimer's disease; schizophrenia; parkinson's disease; Huntington's diseases; ovulatory defect; muscular dystrophy; ss.

The LSG has high level of tissue specificity for lungs and is overexpressed in cancerous tissues. The sequence serves as a diagnostic marker for detecting, monitoring, staging and prognosticating lung cancer. The diagnosis involves comparing levels of LSG in samples obtained from patient and normal control.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 6;

Copolynucleotide sequences. These are used in the method of the invention
Copolynucleotide sequences. These are used in the method of the invention
Copolynucleotide tuilo5 nucleic acid. The method comprises treating a
Copolynucleotide tuilo5 nucleic acid. The method comprises treating a
Copolynucleotide tuilo5 specific nucleic acid, or its complement
Copolynucleotides tuilo5 specific nucleic acid. Specific nucleic
Copolynucleotides (AAV54616 to AAV54621). LUIO5 is a lung disease marker.
Copolynucleotides (AAV54616 to AAV54621). LUIO5 is a lung disease marker.
Copolynucleotides which a recombinant expression system that contains
Copolynucleotides which are used to express recombinant
Copolynucleotides which are used to raise antibodies. The antibodies are
Copolynucleotides which are used to raise antibodies. The antibodies are
Copolynucleotides and nucleic acid sequences are used for diagnosis, staging,
Copolynucleotides are also used to screen for specific ally cancer. The LUIO5
Copolynucleotides are also used to screen for specific binding agents, useful
Copolynucleotides are also used to screen for lung disease (present at high
Copolynucleotides are also used to screen for lung disease (present at high
Copolynucleotides are also used form or in an unusual body compartment). LUIO5
Copolynucleotides are used form or in an unusual body compartment). LUIO5
Copolynucleotides are also used form or in an unusual body compartment). LUIO5
Copolynucleotides are used form or in an unusual body compartment). LUIO5
Copolynucleotides are used form or in an unusual body compartment). LUIO5
Copolynucleotides are used form or in an unusual body compartment). LUIO5
Copolynucleotides are used form or in an unusual body compartment). LUIO5
Copolynucleotides are used form or in an unusual body compartment.

Human; PRO; benign tumour; malignant tumour; lymphoid malignancy; leukaemia; neuronal disorder; stromal disorder; blastocoelic disorder; inflammatory disorder; immune disorder; angiogenic disorder; gene therapy; cytostatic; neuroprotective; gene; ss.
The present invention relates to the isolation of novel human PRO polypeptides and the polynucleotide sequences encoding them. The PRO polypeptides, agonists, antagonists or anti-PRO antibodies are useful for treating benign or malignant tumours (e.g. renal, kidney, bladder, breast, etc), leukaemias and lymphoid malignancies, other disorders such as neuronal, glial, astrocytal, hypothalamic, glandular,
                                                                                                                            Thirty five nucleic acids encoding PRO polypeptides, useful for treating benign or malignant tumours, leukaemias and lymphoid malignancies, inflammatory, angiogenic and immunologic disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             GCGAGGACCGGGTATAAGAAGCCTCGTGGCCTTGCCCGGGCAGCCGCAGGTTCCCCGCGC 533

The invention provides membrane-bound PRO polypeptides and polynucleotides encoding them. The PRO sequences of the invention were identified based on extracellular domain homology screening. The PRO sequences have homology with proteins including LDL receptors, TIE ligands and various enzymes. The membrane-bound proteins and receptor immunoadhesins, for instance, can be used as therapeutic agents. Receptor receptor-ligand interactions. The membrane-bound proteins can also be employed for screening of potential peptide or small molecule inhibitors of the relevant receptor-ligand interaction. The PRO encoding sequences are useful as hybridization probes, in chromosome and gene mapping and in the generation of antisense RNA and DNA. PRO nucleic acid sequences will also be useful for the preparation of PRO polypeptides, especially by recombinant techniques.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 07-DEC-2000
The present invention describes human secreted and transmembrane PRO proteins. The PRO proteins have cytostatic activity. The PRO proteins can be used for targeted delivery of bioactive molecules, such as expected solutions, radiolabels or antibodies, that cause cell death. PRO nucleotide sequences, and their fragments, can be used as hybridisation probes, in sequences, and gene mapping, and in the generation of anti-sense RRA and DNA. They may also be used to produce transgenic animals which are used to develop and screen therapeutically useful reagents. The PRO

```
nucleotide and protein sequence can be used for tissue typing and in treating cancer. Anti-PRO antibodies can be used in diagnostic assays. ARF4470 to AAF44470 represent PCR primers and hybridisation probes used in the isolation of human PRO sequences. AAF44087 to AAF44269 and AAB65134 to AAB65300 represent human PRO polynucleotide and protein AAB6510 represent human PRO polynucleotide and protein sequences given in the exemplification of the present invention.
                                                                                                                                                                                                                              used

                                                                                                                                                                                                                                                                                                                                                                                                                     δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention describes an isolated human PRO polypeptide. The PRO CC polypeptides are useful in detecting PRO polypeptides in a sample, in CC linking a bioactive molecule to a cell expressing a PRO polypeptide, and CC in modulating at least one biological activity of a cell expressing a PRO CC polypeptide. PRO1312 stimulates hypertrophy of neonatal heart and is thus CC useful for treating cardiac insufficiency disorders. PRO1154 and PRO1366 CC pRO1369 and PRO1387 induce c-fos in endothelial growth, and PRO536, CC PRO1360 and PRO1387 induce c-fos in endothelial growth, and PRO536, CC pRO1360 and PRO1387 induce c-fos in endothelial growth, and PRO536, CC pRO1360 and PRO1387 induce c-fos in endothelial cells, and are thus cells in the properties of this polypeptide are useful for treating conditions or disorders where angiogenesis would be beneficial, e.g. wound healing and ancagonist of this polypeptide are cells and is thus useful for inhibiting endothelial cell growth in cells and is thus useful for inhibiting endothelial cell growth in CC enls and is thus useful for inhibiting endothelial cell growth PRO826, CC pRO1068, PRO1184, PRO1346 and PRO1375 stimulated proliferation of endothelial cell growth in the proliferation of college proliferation of mammalian kidney mesangial cells, and therefore are useful for treating kidney disorders associated with dermatitis, herpetiformis or Crohin's college proliferation and/or redifferentiation of chondrocytes in culture and college proliferation and/or redifferentiation of chondrocytes in culture and college proliferation and college proliferation and arthritis. This sequence represents a novel human PRO protein polynucleotide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

New transmembrane polypeptides and nucleic acids encoding the polypeptides, useful in gene therapy, in chromosome identification, chromosome markers, or in generating probes -

Claim 2; Fig 289; 650pp; English.

The invention discloses isolated PRO secreted/transmembrane polypeptides CC comprising a sequence without signal peptide and the nucleic acid CC encoding them. The polypeptides can be used to raise antibodies that CC specifically bind to the PRO polypeptide, for linking a bloactive molecule to a cell expressing a PRO protein and for modulating at least CC one biological activity of a cell. The PRO polypeptides or polynucleotides are also useful in gene therapy, in chromosome CC identification, as chromosome markers, or in generating probes. The PRO CC plypeptides are useful as molecular markers for protein CC electrophoresis, and the isolated nucleic acids may be used for cc electrophoresis, and the isolated nucleic acids may be used for cc acids may also be used in tissue typing. Anti-PRO antibodies are useful in diagnostic assays for PRO, and in affinity purification of PRO from CC acids may also be used in tissue typing. Anti-PRO antibodies are useful CC in diagnostic assays for PRO, and in affinity purification of PRO from CC ABX90083 ABX90468 are the genes encoding, the primers amplifying and the CC wrobes detecting the PRO polypucleotides of the invention. CC Note: The sequence data for this patent is also available in electronic format from USPTO at sequance sprey/sequence.)

New secreted and transmembrane PRO polypeptides (e.g. PRO183, PRO184, PRO361 or PRO846) useful as targets for therapeutic intervention in cancers (e.g. lung or breast cancers), or for diagnosing these cancer: cancers

Claim Fig 289; 647pp; English.

The invention discloses isolated PRO secreted/transmembrane polypeptides comprising a sequence without signal peptide and the nucleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptide, for linking a bioactive molecule to a cell expressing a PRO protein and for modulating at least one biological activity of a cell. The PRO polypeptides or polynucleotides are also useful as pharmaceuticals, diagnostics, biosensors or bioreactors, for detecting or treating e.g. tumours in mammals, e.g. humans, dogs, cats, cattle, horses, sheep, pigs, goats or rabbits as targets for therapeutic intervention in certain cancers (e.g. colon, lung or breast cancers) and diagnostic determination of the presence of these cancers. The PRO polypeptides are also useful as molecular weight markers or for chromosome identification. The PRO genes

                                                                                                                                                                                                  are useful as hybridisation probes or for screening libraries of hum cDNA, genomic DNA or mRNA. The PRO genes may also be used in gene therapy, particularly for replacing a defective gene. The sequences presented in ABX79290-ABX79675 are the genes encoding, the primers amplifyling and the probes detecting the PRO polynucleotides of the invention.

Note: The sequence data for this nateral in the PRO polynucleotides of the content of the sequence data for this nateral invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the Isogenic strain 92; cn bw sp. the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebl.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector pBeloBAC11.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pleter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial ECORI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; on bw sp, the same strain used for the BDGP's and was constructed by the Ibrary and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be tronger for hybridization buffalo.edu/drosophila_bac.htm.

                                                                                                                                                                                                                                            /note="Vector: pBluescript II SK-; Site_1: EcoRI; Site_2: XhOI; This library, constructed by John Davies and Jeffrey XhOI; This library, constructed by John Davies and Jeffrey McDermott, combines coNAs from CC-1690 cells grown to mid-log phase in TAP (acetate-containing) medium in the light. TAP medium in the dark, HS (minimal) medium in ambient levels of CO2 and HS medium bubbled with 5% CO2. PolyA mRNA was purified from each sample, pooled and cDNA synthesized. The cDNA was directionally cloned into lambda SAP II (Stratagene) in the EcoRI (5') and XhOI (3') sites. PBluescript II SK- plasmids were excised from the lambda ZAP clones by superinfection with ExAssist (Stratagene) phage. The library was normalized using method 4 described in Bonaldo et al (1996) Genome Research 6: 791-806."

Petermination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Oscegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcorI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; on bw sp, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1008
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       181

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             541
